Chosen Option : **1**

Comprehension:

In many countries the legal systems are very complex. This is because they have been developed over very long times. Every time that a new case is decided it can have an affect onfuture cases. This means that the people who work in legal situations have to be clever. They have to know and understand all the rules and precedents. A precedent is when a previous decision will have an effect on future cases as it was related to an important point.

There are many people who work with the law, such as solicitors or judges. A solicitor is a lawyer who spends most of their time advising their clients and preparing legal documents,such as wills or contracts for buying and selling houses. They need to be very careful and make sure that all the details are correct, otherwise their clients might lose a lot of money.

A barrister is a type of lawyer who works in court rooms. They will either work for the prosecution or defence sides. If they are a prosecution lawyer, they are trying to prove that thedefendant (the person on trial) committed a crime. They have to present evidence to show that the defendant is guilty. If they are a defence lawyer then they work for the defendant and have to show that the evidence presented is not enough to prove that their client is guilty and he should be judged to be not guilty.

Then there are judges and magistrates. A magistrate will hear trials about less serious crimes,while a judge's will be about more serious crimes. These are the people who have to decide what punishment will be given to someone who is guilty. The punishments could range from asmall fine up to a long prison sentence, and even a death sentence in some countries. The trial happens in the judge's courtroom, so the judge is responsible for making sure the trial is run fairly and follows the law.

If a lawyer believes that a trial was not fair or there was a mistake in the law, they can ask for a new trial that will generally be heard by an appeal court where an appeal judge will be in charge. Often appeal judges will be the most experienced judges in a country, so they know alot about the law and how to apply it.

Economists, ethicists and business sages persuade us that honesty is the best policy, but their evidence is weak. We hoped to find data that would support their theories and thus, perhaps encourage higher standards of business behavior. To our surprise, our pet theories failed to stand up. Treachery, we found, can pay. There is no compelling economic reason to tell truth or keep one's word punishment for the treacherous in the real world is neither swift nor sure. Honesty is, in fact, primarily a moral choice. Business people do tell themselves that,in the long run, they will do well by doing good. But there is little factual or logical basis for this conviction. Without values, without a basic preference for right over wrong, trust based onsuch temptation. Most of us choose virtue because we want to believe in ourselves and have others' respect and belief in us. And for this, we should be happy. We can be proud of a system in which people are honest because they want to be, not because they have to be.
Materially, too, trust based on morality provides great advantages. It allows us to join in great and exciting enterprises that we could never undertake if we relied on economic incentivesalone.

Economists tell us that trust is enforced in the market place through retaliation of reputation.If you violate a trust your victim is apt to seek revenge and others are likely to stop doing business with you, at least under favorable terms. A man or woman with a reputation for fair dealing will prosper. Therefore, profit maximisers are honest. This sounds plausible enough until you look for concrete examples. Cases that apparently demonstrate the advantageous consequences of fostering or having trust turn out to be few and weak, while evidence that treachery can pay is compelling.

Treachery, we found, can pay. There is no compelling economic reason to tell truth or keep one's word punishment for the treacherous in the real world is neither swift nor sure. Honesty is, in fact, primarily a moral choice. Business people do tell themselves that,in the long run, they will do well by doing good. But there is little factual or logical basis for this conviction. Without values, without a basic preference for right over wrong, trust based onsuch temptation. Most of us choose virtue because we want to believe in ourselves and have others' respect and belief in us. And for this, we should be happy. We can be proud of a system in which people are honest because they want to be, not because they have to be.
Materially, too, trust based on morality provides great advantages. It allows us to join in great and exciting enterprises that we could never undertake if we relied on economic incentivesalone.

Economists tell us that trust is enforced in the market place through retaliation of reputation.If you violate a trust your victim is apt to seek revenge and others are likely to stop doing business with you, at least under favorable terms. A man or woman with a reputation for fair dealing will prosper. Therefore, profit maximisers are honest. This sounds plausible enough until you look for concrete examples. Cases that apparently demonstrate the advantageous consequences of fostering or having trust turn out to be few and weak, while evidence that treachery can pay is compelling.
