There is 3 × 5 matrix which can produce signals which in turn help in the illumination of some bulbs. The row of the matrix are denoted by α, β and γ from bottom to top and the columns are denoted by the alphabets P, Q, R, S and T from left to right.

α row contains number which are consecutive multiple of 7, starting from 28 (from left to right).

β row contains number which are consecutive multiple of 11, starting from 11 (from left to right).

γ row contains number which are consecutive multiple of 13, starting from 13 (from left to right).

The matrix helps in producing signals which can be either a single string of number A- or two-line string A and B.

There are 4 lights W, X, Y and Z. Based on the outcome of the strings mentioned above one of the light blinks.

Condition for blink:

1. If the outcome is below 85, then W will blink
2. If outcome range is 85-110, then X blinks
3. If outcome range is 111-210, then Y blinks
4. If outcome is greater than 210, then Z blinks

For outcome of the string:

1. If the string has all even numbers, then outcome of the string is obtained by adding all the numbers.
 2. If an odd number is followed by an even number then the one's places of all the two-digit numbers are deleted and, tenth place are multiplied to get the outcome
 3. If the string contains 2 prime number, then the tenth's place is deleted from each of the two-digit number and remaining number are multiplied.
 4. If no above logic is followed, then simple outcome is addition of the numbers.
706. If $A = \gamma R \beta S \gamma P \gamma T$, then which bulb blink?
(a) Z (b) X (c) W (d) Y
(e) Either Y or Z
707. If $A = \alpha P \alpha R \gamma S \beta Q$, then which bulb blink?
(a) Z (b) X (c) W (d) Y
(e) Either W or X
708. If $A = \gamma P \beta T \beta P \alpha Q$, then which bulb blink?
(a) Z (b) X (c) W (d) Y
(e) Either W or X
709. If $A = \alpha P \gamma Q \alpha S \beta R$, then which bulb blink?

DIRECTIONS (Qs. 892-896): Answer the questions on the basis of the information given below.

(SBI PO Main-2019)

There is a rectangular sheet pasted on a wall with 8 unequal divisions (in height) vertically. Its dimensions are 16*64 sq. cm. Top division is numbered 1, then 2, and so on. Each division contains different number of small square sheets pasted in them. The side of these small square sheets is 4 cm each. One layer inside a division can contain only 4 sheets and remaining sheets are kept above these 4 in layers accordingly (The second layer can be started to fill with sheets only after filling the first layer with 4 sheets, and so on). So height of a particular division is according to the number of layers in respective divisions. Each division contains different colored sheets - purple, black, white, yellow, red, gold, saffron, green but not necessarily in the same order (If division 1 contains black colored sheet, then all sheets in division 1 are black colored)

There are 2 divisions between the division with 4 sheets and red colored sheets. The sum of sheets in division number 1 and 6 is 14. If the sheets in division number 4 are combined to form a large square, they form a 8*8 sq. cm square. Height of division number 7 is 12 cm. The division carrying yellow colored sheets is next in

number to division carrying red colored sheets. The division leaving 3 divisions from division carrying red colored sheets is 4 cm in height. No division carries less than 2 sheets. There are 3 divisions between the division with 7 sheets and black colored sheets. The division with red colored sheets contains 6 sheets. 3 of the divisions have same height (in cm) and number of sheets in them respectively. There is 1 division between the division with 8 sheets and White colored sheets. There are 3 divisions between the division with 10 sheets and saffron colored sheets. There are more than 2 divisions between the division with saffron colored and White colored sheets. The division with black colored sheets does not contain 8 sheets. There is 1 division between the division with 5 sheets and green colored sheets. The division with gold colored sheets is above the division with green colored sheets. The division with purple colored sheets is below the division with gold colored sheets. There are total 54 sheets to be pasted on the rectangular sheet.

892. How many sheets does division 7 contain?
 (a) 8 (b) 11 (c) 10 (d) 12
 (e) 9
893. Division 6 contains which colored sheets?
 (a) Gold (b) Wheat (c) Bac (d) Green

 (a) 28 cm
 (b) 26 cm
 (c) 24 cm
 (d) Other than those given in options
 (e) 20 cm
895. Which of the division numbers satisfy the condition - 3 of the divisions have same height (in cm) and number of sheets in them respectively?
 (a) 2, 3, and 6 (b) 3, 4, and 6
 (c) 2, 3, and 5 (d) 2, 4, and 6
 (e) None of these
896. How many divisions are there between the divisions having 7 sheets and the division with White colored sheets?
 (a) One (b) Three (c) Seven (d) Four
 (e) Six

Sol. (194-197):

From Statement A, Yellow was the only colour used in all the four rooms. It was used at least once for walls, carpets and curtains
From statement B, Dining and bed room have same set of colours.

	Walls	Carpet	Curtain
Living Room			
Study Room			

From statement C, The same colour was chosen for the curtains in the bedroom, the carpet in the living room and the walls in the dining room. And that colour is not used in Study Room, hence that colour must not be yellow as it is used in all the four rooms.

And must not be grey as it is used only twice and that too for curtains (From statement E)

	Walls	Carpet	Curtain
	////		
			////
Living Room		////	
Study Room			

From statement D, The only room with both green and grey in its colour scheme had carpet of the same colour as in the dining room. If a room that has green and grey colour then its 3rd colour must be Yellow as it is used in all the rooms. That room must not be Dining and Bed room as they have same set of colours. The Carpet of this room must not be of grey colour (from statement E).

From statement F:- The study room walls were painted the same colour as the living room walls.

	Walls	Carpet	Curtain
Dining Room	////		
Bed Room			////
Living Room	××××	////	
Study Room	××××		

Now from D, E and F, we have two cases

Case (i)

Walls	Carpet	Curtain
Green/Yellow	Yellow/Green	Grey

This combination must belongs to either. Living or Study rooms. If it belongs to living rooms then

	Walls	Carpet	Curtain
Living Room	Green	Yellow	Grey

But this combination is ruled out as from condition C the common colour can not be Yellow.

	Walls	Carpet	Curtain
Living Room	Yellow	Green	Grey

But in this case from statement D Dining room will have Walls and carpet with green colour, but it is not possible as repetition of colour is not allowed.

Case (ii)

So only possibility is that yellow grey green belongs to study room. And then the common colour mentioned in statement C is Orange colour, hence we have two possibilities.

	Walls	Carpet	Curtain	Explanation
Dining Room	Orange	Yellow	Grey	From statement D, Curtains colour is grey
Bed Room			Orange	
Living Room	Green	Orange	Yellow	The 3rd colour in curtain is Yellow
Study Room	Green	Yellow	Grey	

This case is ruled out as Dining and bed room has same combination hence Grey can not be used other than Curtain.
OR

	Walls	Carpet	Curtain	
Dining Room	Orange	Green	Yellow	Carpets Green colour is from Statement D, & Yellow must be present (Step 1)
Bed Room	Green	Yellow	Orange	In carpet Yellow must be used
Living Room	Yellow	Orange	Grey	(As Grey is used at least twice step 2)
Study Room	Yellow	Green	Grey	

194. (c) Using above matrix, we can say Bed room
195. (d) Dining room and study
196. (a) Dining room
197. (b) Dining room- yellow curtains.

Sol. (678-681):

678. (d) L % means the one who earns 480 less than L sits 4th to the left of L.
 And Q # means the one who earns 800 more than Q sits immediate left of Q.
 So,
 4th left of L is Q and immediate left of Q is F which earns 5100.
 It means Q is $5100 - 800 = 4300$
 and L is 480 less than Q = $4300 + 480 = 4780$

679. (b) We got : L&Q from the above question (188)
 L = 4780 and Q = 4300
 Here I % means the one who earns 480 less than I sits 4th to the left of I
 I = $5100 + 480 = 5580$
 And J@ one who earns double amount than J sits 2nd to the right of J.
 Here 2nd to the right of J is Q which is $4780/2 \Rightarrow 2390$
 So the difference of salary of I and J is $5580 - 2390 = 3190$.

680. (b) F # means the one who earns 800 more than F sits immediate left of F.
 Here immediate left of F is K.
 Hence K = $5100 + 800 = 5900$
 G& means the difference between the earning of G& the one who sits 3rd to the left of G is greater than 2000.
 Here $G - K > 2000$
 $G > 2000 + 5900$
 $G > 7900$

Hence we have option (b) which is greater than 7900.
 681. (c) F # means K from the ques (190)
 K = 5900
 and G% means one who earns 480 less than G sits 4th to the left of G.
 Here 4th to the left of G is H.
 H = 2790
 G = $2790 + 480 = 3270$
 Hence the sum of salary G and K = $3270 + 5900 = 9170$

γ	13	26	39	52	65
β	11	22	33	44	55
α	28	35	42	49	56

706. (c) $A = \gamma R \beta S \gamma P \gamma T$
 So, $A = 39\ 44\ 13\ 65$
 As it is clear that condition (2) is applicable in the above ques so the outcome will be—
 Outcome = $3 \times 4 \times 1 \times 6 = 72$
 As the outcome is below 85, so clearly W will blink.
707. (d) $A = \alpha P \alpha R \gamma S \beta Q$
 So, $A = 28\ 42\ 52\ 22$
 As it is clear that condition (1) is applicable in the above ques so the outcome will be—
 Outcome = $28 + 42 + 52 + 22 = 144$
 As the outcome is 111-210, so clearly Y will blink.
708. (c) $A = \gamma P \beta T \beta P \alpha Q$
 So, $A = 13\ 55\ 11\ 35$
 As it is clear that condition (3) is applicable in the above ques so the outcome will be—
 Outcome = $3 \times 5 \times 1 \times 5 = 75$
 As the outcome is below 85, so clearly W will blink.
709. (d) $A = \alpha P \gamma Q \alpha S \beta R$
 So, $A = 28\ 26\ 49\ 33$
 As it is clear that condition (4) is applicable in the above ques so the outcome will be—
 Outcome = $28 + 26 + 49 + 33 = 136$
 As the outcome is 111-210, so clearly Y will blink.
710. (a) $A = \alpha T \gamma S \alpha S \gamma T$
 So, $A = 56\ 52\ 49\ 65$
 As it is clear that condition (4) is applicable in the above ques so the outcome will be—
 Outcome = $56 + 52 + 49 + 65 = 222$
 As the outcome is greater than 210, then Z blink.
